

IJETED is the promotion of engineering and technology through challenging traditional and conventional methods and publishing new methods in global, regional and national changing climates. IJETED will give a chance to discuss the effects of various technologies and the research undertaken and needed to better define their effects on engineering.

IJETED will give a chance to answer questions about how technical problems are brought together and solved, and how management issues are decided between various resources. IJETED aims to strengthen the partnerships between all disciplines of engineering to develop the current technologies.
