

## Educational Acceleration of Organization Strategy as Work Relationship Responsibility

*Dr. Nasser Fegh-hi Farahmand*

Department of Industrial Management, Tabriz Branch, Islamic Azad University, Tabriz, Iran

E-mail: farahmand@iaut.ac.ir

### Abstract

Organizations are most likely to do the same when experiencing decline. Without organizational empowerment, management cannot enable an organization to compete for the future, but developing distinctive capacity can. One then wonders if developing appropriate characteristics in conjunction with appropriate competencies would not ensure a better performance in a more intensely competitive future. Implementing good environmental and work relationship practices is good work relationship - it can give you a competitive advantage and help foster goodwill toward your work relationship. This article attempts to explain the educational acceleration of organization strategy by patterns of thinking. The importance of strategic, long-term policy and educational acceleration of organization is very clear to planners. Work relationship managers like to follow a similar and routine work relationship behavioral pattern. Educational acceleration of organization, normally taken as a part of educational acceleration of organization, therefore also tends to run in cycles of around last years.

**Key words:** educational acceleration of organization, educational acceleration of organization strategy, work relationship responsibility

### 1. Introduction

Making a difference in organization or creating the very best product or service on the market or simply doing something loves to do. Most likely, organization will quantify success in many ways. It isn't difficult to envision what you want out of organizational work relationship, but how will organization get there? There are many common steps you can take and missteps you should avoid on organization pathway to prosperity. Organizations use organizational resources as the basic ingredient for all that is required for their operations. They are therefore eager to maintain and improve the quantity of expendable organizational resources by not only resources utilization, but by also identifying, nurturing and maintaining characteristics that promote organizational performance. Improved and sustainable performance ensures that an organization continues to fulfill its mission and survive into the competitive future. Many externals and organizational variables have been identified in the literature as affecting organizational empowerment. The fact that some variables affect organizational empowerment managers and some researchers to seek to identify those factors that positively or negatively affect the particular organization or industry of their interest with the aim of strengthening the positive variables and ameliorating the effect of the negative ones for those organizations and industries to post superior economic performance.

Organizations are most likely to do the same when experiencing decline. Without organizational empowerment, management cannot enable an organization to compete for the future, but developing distinctive capacity can. One then wonders if developing appropriate characteristics in conjunction with appropriate competencies would not ensure a better performance in a more intensely competitive future. Furthermore, it seems that the emphasis on organizational empowerment as structure, strategy and systems has not yielded the desired results as some of the companies where these variables have been changed, after sometime, went back to experiencing declining performance. It is therefore obvious that more research needs to be done to identify characteristics that enhance organizational performance.

### 2. Educational Acceleration of Organization

The key to organization success is having educational acceleration of organization in place. Whether organization is about to launch a start-up or organization have been in work relationship

for years, organizational work relationship' direction is guided by your educational acceleration of organization. In spite of this general awareness, such long-term work relationship, strategic-level planning of work relationship has been lacking in most organizations. A central motivation for this has been the public uneasiness towards many of the applications of gene organizations technology, as well as the general distrust of the public towards officials, scientists and representatives of organizations in the management of risks.

### **3. Educational acceleration of organization strategy**

The operational concept based on customer satisfaction where the operation of quality management system is customer-oriented and aims at improving customer satisfaction; customers' needs and expectations are satisfied through clear management responsibility, communication, resource management and product realization process; the structure of measuring and monitoring customer satisfaction is proposed on the basis of overall performance of the quality system and requires enterprises evaluate performance from the perspective of customers.

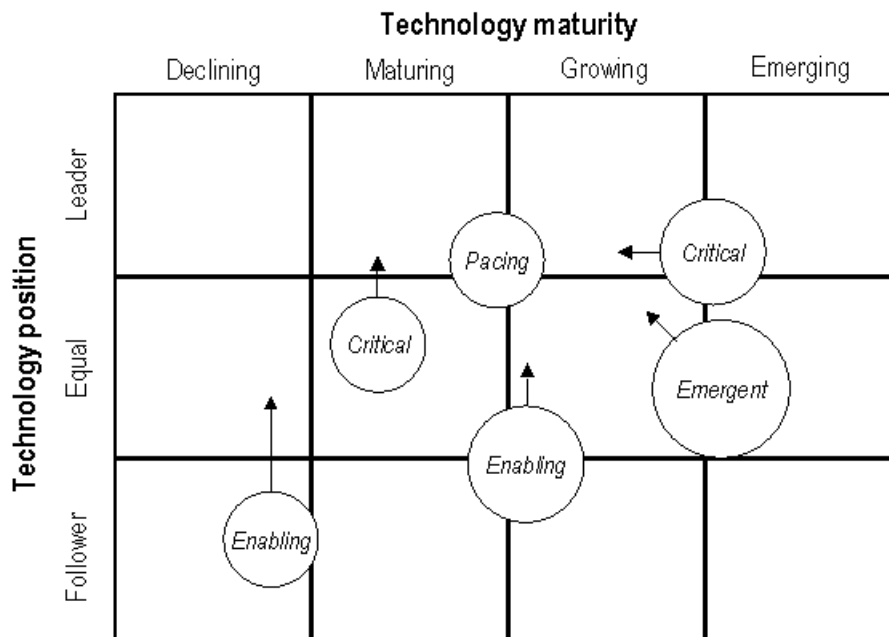

It is generally arguing that effective Educational acceleration of organization strategy is one of the important factors in work relationship success. The most extensive review, although now some years old, is the analysis that there seemed to be a consensus that planning was linked positively to growth undertaken.

There are some argues that formal written planning may be inappropriate for the organizations but this seems a minority view. It can be argued that educational acceleration of organization is as important to organizations as to larger organizations and standard textbooks on entrepreneurship offer chapters on Educational acceleration of organization whilst a range of specialist publications outline the best ways of writing work relationship. The organizational performance information, unclear goals, inappropriate selection and use of technology, inability to integrate workers and processes and use of misleading metrics or improper measurement approaches are the major barriers in implementing and managing projects systems that seek to identify individuals with the ability to learn and adapt to new situations and markets can provide a firm with competitive advantage. The importance of strategic, long-term policy and planning in science and technology is very clear to planners and policy developers, from the fact that they need both considerable resources in order to carry out the planned activities, and a long lead time to accumulate the required trained manpower. The mission of organization is work relationship instrumental. In general, terms, there is an endemic need for increasing work relationship effective communication. Thus, the inclusion of the in the work relationship structures of organization decision-making is neither principally refuted nor taken as a point of departure. In this model, the work relationship persons empowerment of sustainable decision-making are core values, to which increasing public participation is though to be a most appropriate means.

### **4. Educational acceleration of organization preparation**

In organization, where a work relationship exists, the preparation of the educational acceleration of organization may driven by external forces. The most obvious of these are the requirements of external agencies providing funding for either start up or expansion. The form of the plan may vary between the agencies but the educational acceleration of organization is the minimum document required by sources as Figure 1.

Figure 1. Educational acceleration of organization preparation

In addition to its role in work relationship funding, the work relationship may serve as a strategic planning document for the entrepreneurs, a plan to guide the work relationship and serve as a basis for taking strategic decisions and it may serve as a subsequent monitoring device. Anyhow, educational acceleration of organization gives an overview of organizational work relationship where organization have been, where you are now, and where organization is going in the future. Benchmarking allows you to evaluate your performance and ensure that your company is operating at an optimum level.

The more we understand people and their total environment, the more their needs are likely to be met. When we talk about valuing workers relationships, the scope of definition is expansive. On the one hand, it is simply the value that workers generate for the organization. On the other hand, it is purely the value of the relationship. Neither definition is more correct than the other; however, the purpose and approach for valuing each are different. A positive experience throughout the workers cycle should foster trust and develop loyalty, therefore allowing an organization to generate more revenue for less incremental expenditure. However, the escalating cost of scientific and technological research and development, together with the limiting resources of governments, make such strategy of overall support impossible, even for relatively rich countries.

The central mission of organizations activities under the enlightenment model is to raise the educational acceleration of organization level of the organization. It is not enough for us to understand the socio-cultural sources of these deviant orientations, it is necessary for us to do something practically to arrest and control them.

Productivity should reflect our total commitment to improve the way we do things, our attitude to work, a commitment to improve our work ethics, a commitment that whatever we do today can be improved upon. Tackling and overcoming the problem of low productivity of organizational workers is not impossible although daunting.

### 5. Educational acceleration of organization strategy factors

To begin the planning process, organization will need to do some critical analysis; educational acceleration of organizing is about realistically forecasting where organizational work relationship is going. A few tactical actions for implementation can make the challenge simpler and provide leadership that is supporting. Obtain support from the board of directors, because an organization's total quality efforts must begin at the very top and begin with the board of directors as Figure 2.

Figure 2. Educational acceleration of organization strategy factors

Strategy Area of influence	Corporate strategy	R&D strategy
Resources	<i>Allocation between functions (marketing, production, R&amp;D, etc.)</i>	<i>Allocation between projects</i>
Objectives	<i>Related to business environment</i>	<i>Related to corporate environment</i>
Business areas	<i>Product / market strategy Product / market mix</i>	<i>Technology / product strategy Portfolio balance</i>
Timescale	<i>Balance between long / medium / short term</i>	<i>Balance between long / medium / short term</i>

However, the significance of the influence of the environment on organization's operational activities and performance was only acknowledged. In fact, stress that organizational activities are influenced by what happens in the external environment. Inability to ineffectively manage the human factor as manifested in several negative ways including the following; employees often arrive at the office fatigue and exhausted as a result of poor transportation facilities and harsh living conditions in most urban cities. They are also compelled to make use of materials and machinery which are far from suitable for attaining the desired level of performance.

There was every reason to believe that the organizational worker could be as efficient and productive as its counterparts anywhere in the world. The performance of organization, which determines its survival and growth, depends to a large extent on the productivity of its Educational acceleration of organization Strategy. In fact, the wealth of a nation as well as socio-economic well being of organization depends on the effectiveness and efficiency as productivity of its various sub components.

Organizational Educational acceleration of organization Strategy is generally regarded as the most dynamic of all the factors that are employed for the creation of wealth, having the potential to

energies and serve as catalyst to all of the other resources. Productivity is thus of fundamental importance to the Organizational Educational acceleration of organization Strategy of whatever status, to the organization whether commercial or not and to the national economy at large and accordingly.

Performance by productivity in an organization can, in principle, be influenced by a wide range of internal and external variables, which may be categorized as:

- General factors: Among which are climate, geographic distribution of raw materials, fiscal and credit policies, adequacy of public utilities and infrastructural facilities, etc.
- Organizational Educational acceleration of organization Strategy: Namely, the degree of integration, percentage of capacity, size and stability of production, etc.

Performance by productivity, the problem remained more or less unabated. It is not in doubt that organization is richly and extra-ordinarily endowed with all the three basic principal factors needed for enhancement of productivity, namely, capital and resources, it has been unable to take advantage of these factors to obtain at least a corresponding level of outputs consequent to which the country, several years since it attained political independence, is yet poverty ridden.

Educational acceleration of organization is advancing at a very fast pace, and obsolescence of physical work relationship infrastructure, as also of skills and competence, take place rapidly.

A major initiative to modernize the infrastructure for SSBE in organization will be undertaken. Educational acceleration of organization department in organization will be selected for special support to raise the standard of work relationship research. To begin with, a significant number of work relationship person as also work relationship engineering, would be selected for this support to make an impact. Flexible mechanisms for induction of new SSBE in key areas of science would be developed.

The setting up of more efficient funding mechanisms will be examined, either by creating new structures or by strengthening or restructuring the existing ones, for promotion of basic research in educational acceleration of organization. In particular, administrative and financial procedures will be simplified to permit efficient operation of research programs in diverse institutions across the country. Creation of world class work relationship in carefully selected and nationally relevant fields will be undertaken, to enhance our international competitiveness in areas where organizations have strengths, opportunities or natural advantages. Indigenous expertise will be used to the maximum extent possible.

The number of work relationship and work relationship technologists, while being large in absolute numbers, is not commensurate with the requirements in quality and when measured on a per capita basis. The demand is bound to increase in the coming years with more intensive activities involving educational acceleration of organization. There is need to progressively increase the rate of generation of high work relationship skilled at all levels. This process would naturally entail reversing the present flow of work relationship talent away from educational acceleration of organization by innovative schemes. In order to encourage in educational acceleration of organization, mobility of educational acceleration of organization between organization and organizational environment will be ensured.

For building up the educational acceleration of organization base in relevant areas, the agencies and departments concerned with educational acceleration of organization will make available substantial funding from their allocation. Flexible work relationship mechanisms will be put in place in organization and organizational environment to enable work relationship researchers to change fields and bring new inputs into traditional disciplines, and also to develop areas. There will be emphasis on a continuing process of retraining and re skill to keep educational acceleration of

organization with the rapid advances taking place. Wherever considered necessary, training abroad will be resorted to, so as to build up a skilled base rapidly.

New mechanisms would be instituted to facilitate the return of educational acceleration of organization and work relationship technologists of organization as also their networking, to contribute to organizational environment and educational acceleration of organization. It will also be ensured that higher education is available to the widest possible section of creative educational acceleration of organization.

A strong base of development of science work relationship engineering provides a crucial foundation for a vibrant program of educational acceleration of organization development. Priority will be placed on the development of educational acceleration of organization which address the basic needs of the population; make organizational competitive and make the economically work relationship strong. Special emphasis will be placed on equity in development, so that the benefits of educational acceleration of organization growth reach the majority of the population, particularly the disadvantaged sections, leading to an improved quality of life for every citizen of the organization. These aspects require educational acceleration of organization foresight, which involves not only forecasting and assessment of technologies but also their organization and organizational environment environmental consequences.

Intensive of science work relationship engineering will be launched to develop innovative educational acceleration of organization of a breakthrough nature; and to increase our share of high-tech products. Aggressive international benchmarking will be carried out. Simultaneously, efforts will be made to strengthen traditional industry so as to meet the new requirements of competition through the use of appropriate educational acceleration of organization. This organization is particularly important as it provides employment at lower per capita investment, involves low energy inputs, and carries with it unique civilization traditions and culture. Value addition and creation of wealth through reassessment, redistribution and repositioning of our intellectual, capital and material resource will be achieved through effective use of educational acceleration of organization.

Quality standards of science work relationship engineering testing and calibration laboratories according to international requirements will be given an enhanced push to enable to avoid non-tariff barriers in global trade. Innovation of science work relationship engineering: Innovation will be supported in all its aspects. A comprehensive development of science work relationship engineering system will be created covering educational acceleration of organization as also legal, financial and other related aspects. There is need to change the ways in which work relationship performs, if innovation has to fructify.

Every effort will be made to achieve synergy between development of science work relationship engineering and scientific research. Autonomous technology transfer organizations will be created as associate organizations of universities and national laboratories to facilitate transfer of the know-how generated to organization. Increased encouragement will be given, and flexible mechanisms will be evolved to help, educational acceleration of organization to transfer the know-how generated by them to the industry and be a partner in receiving the financial returns. Organization will be encouraged to financially adopt or support educational and research institutions, fund courses of interest to them, create professional chairs etc. to help direct organization towards tangible organizational goals.

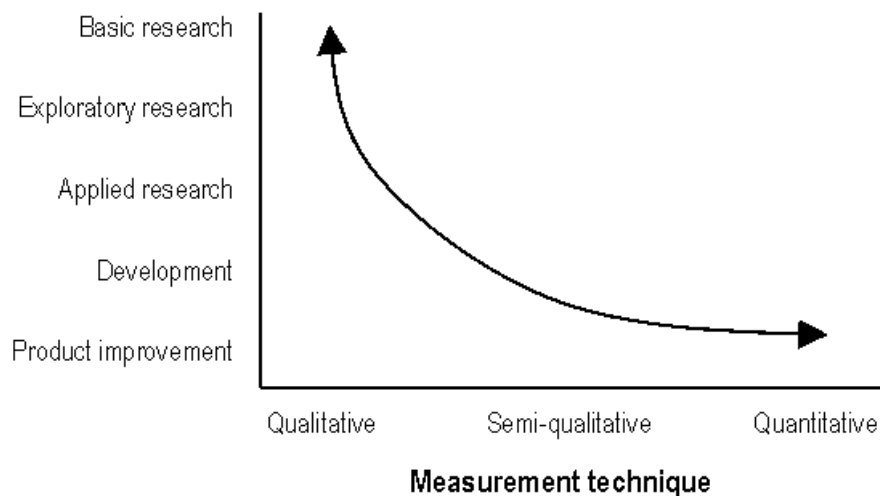

Indigenous knowledge would be further developed and harnessed for the purpose of work relationship generation. Development of educational acceleration of organization adds value to organizational resources and which provide holistic and optimal solutions.

Management of science work relationship engineering educational acceleration of organization has an important role in any general strategy to address the problems of management of the impacts of natural hazards. A concerted action plan to work relationship enhances predictive capabilities and preparedness for meeting emergencies will be drawn up. Measures will be undertaken to promote research on natural phenomena that lead to MSBE activities that aggravate them.

### 6. Educational acceleration of organization strategy implementation

Monitoring of science work relationship engineering and reviewing mechanisms will be significantly strengthened, and wherever not available will be put in place. It will be ensured that the scientific community is involved in, and responsible for, smooth and speedy implementation. Keeping in view these broad objectives, it is essential to spell out a Educational acceleration of organization strategy implementation educational acceleration of organization that will enable identification of specific plans, programs and projects, with clearly defined tasks, estimates of necessary resources, and time targets as Figure 3.

Figure 3. Educational acceleration of organization Strategy plans, programs and projects

There is growing need to enhance public awareness of the importance of educational acceleration of organization in everyday life, and the directions where educational acceleration of organization is taking us. Organization must be able to consider the implications of emerging educational acceleration of organization options.

When organization looks at organizational product or service, it should consider how suited it is to marketing. A marketing strategy that includes an online component is almost always a benefit to work relationship efforts. Outline how organization wants to market and or sell product online. This can be as simple as developing a basic brochure style website to provide information about product or service. It can be as complex as a comprehensive marketing strategy that includes a well-optimized, e-commerce website with an online advertising campaign including banner and affiliate advertising.

Consider organizational target market, its product and your long-range goals.

Suitable mechanisms will be evolved by which independent inputs on educational acceleration of organization and planning are obtained on a continuous basis from a wide cross section of educational acceleration of organization. It will utilize the academies and specialized professional bodies for this purpose. These inputs will form an integral part of the educational acceleration of organizing and implementation of all programs relating to educational acceleration of organization, as also in government decision making and formulation of policies in work relationship sectors.

A greater integration of the programs in work relationship sectors with educational acceleration of organization activities will go a long way in ensuring a wider, more visible and tangible impact. This will call for a certain percentage of the overall allocation of each of the educational acceleration of organization to be devoted for relevant programs and activities in work relationship technology.

A concerted educational acceleration of organization is necessary to infuse a new sense of dynamism in our educational acceleration of organization. The educational acceleration of organization departments, agencies and other academic institutions, including universities i.e. the science and educational acceleration of organization system as a whole, would be substantially strengthened, given full autonomy and flexibility, and de-bureaucratized. Mechanisms will be established to review on a continuous basis the academic and administrative structures and procedures in the educational acceleration of organization system at all levels, so that reforms could be affected to meet the challenges of the changing needs. It will be ensured that all highly educational acceleration of organization is run by educational acceleration of organization. All the major educational acceleration of organization will have high-level scientific advisory mechanisms. Organization will ensure continued existence of educational acceleration of organization which will assist in formulating and implementing various programs and policies. It will have appropriate representation of organization leaders, leading educational acceleration of organization and various scientific departments.

#### **7. Educational acceleration of organization strategy as work relationship responsibility**

Organization will make necessary budgetary commitments for higher education and educational acceleration of organization. It will, through its own resources and also through contribution by organization, raise the level of investment on educational acceleration of organization by the end of the plan. For this, it is essential for organization to steeply increase its investments in educational acceleration of organization. If it does not achieve the expected degree of satisfaction, the manager should identify the cause and work out an improvement scheme to enhance customer satisfaction. Rectification and preventing methods can be used through adjusting original quality policy and target, quality rules, communication, training, resources and operation process, etc. After the adjustment and improvement, enterprises should re-measure customer satisfaction, to ensure the improvement scheme is proper and effective. Organization should provide customers' feedback information to management for inspection and verify appropriateness and effectiveness of the definition of quality policy and target, quality scheme and operation methods. Organization may want to include information about organizational environmental policies and initiatives and organizational contributions to organizational community. The clearly defined educational acceleration of organization strategy as work relationship responsibility tasks, estimates of necessary resources, and time targets as Figure 4.

Figure 4. educational acceleration of organization strategy as work relationship responsibility tasks

		Domain of measurement	
		R&D "production" (generation phase)	R&D "transition" (transition phase)
"Object" of measurement	Output	<p>"Quantity" and "quality" of technology: R&amp;D "good productivity"</p> <p>Technology stock</p> <ul style="list-style-type: none"> <li>• excellence</li> <li>• originality</li> <li>• long term visibility</li> <li>• short term capability</li> </ul>	<p>External customer satisfaction and R&amp;D contribution to shareholder value creation</p> <ul style="list-style-type: none"> <li>• Contribution to business goals</li> </ul>
	Process	<p>Effectiveness of R&amp;D "production" processes</p> <p>Performance of:</p> <ul style="list-style-type: none"> <li>• long term planning</li> <li>• short term selection</li> <li>• project management</li> <li>• operational activities</li> </ul>	<p>Internal customer satisfaction and time performance of R&amp;D "transition" process</p> <p>Time-cost-quality in:</p> <ul style="list-style-type: none"> <li>• new product development process</li> <li>• new process development</li> </ul>

Organization should set up definite policy and target and also the degree of customer satisfaction should be clarified. According to quality target, enterprises should plan total management system structure, authority and responsibility control, operation process, in order to ensure comply with plan and achieve enterprise quality target. Implementing good environmental and work relationship practices is good work relationship can give organization a competitive advantage and help foster goodwill toward organizational work relationship. Organization should discuss ways in which organizational work relationship honors ethical values and respects people, organizational community, and the environment. Customer satisfaction and target management structure derive management system requirements.

Organization should carry out communicating harmonization, encourage staffs involvement and full commitment to customer satisfaction, also managers' decision-making should comply with the work relationship policy and target as the maximum guidance principle. Organizations provide all required resources, according to the plan then produce and sell products to customers.

### 8. E-Educational acceleration of organization strategy as work relationship responsibility

Relevant certifications, such as fair-trade certification, organic certification, or leadership in energy and environmental design certification. Environmental programs and resources could impact organizational work relationship, from greening your work relationship to finding funding to become environmentally efficient. In order to stay competitive in today's market, organization might want to consider where corporate work relationship responsibility fits into your operations.

E-educational acceleration of organization strategy turn customer input into innovation how organization find out the work relationship opportunities in most new products and services and how to rank these opportunities in a prior sequence?

However, the outcome-oriented customers study provides a simply and definite answer, which is that the best work relationship opportunity is in the customer recognized important items, where existing products can not meet their needs. A Web host will provide space for organizational website and allow it to be viewed online. Organization is essentially renting space on the Internet, so it can put organizational website there much like you might rent an office. The Web host will have a number of different packages available. The one organization need depends on how much space it needs, how many email accounts need, how many visitors organizational site will get and how complex website is. Organization gets what pay for. Usually, a budget Web host is not the best idea for a work relationship site. Organization want website to be there when organizational customers are looking for it. Choose a organization with a reputation for excellent customer service and a high level of technical expertise.

Organizational best option is probably going to be a specialized mid-sized hosting company. While larger organization is often very good at providing Internet access, it do not always offer the same level of personalized customer service and specialization as a mid-sized organization. This calculation provides the work relationship opportunity; therefore organization is able to identify the best work relationship opportunity with the most potential. Although this study provides an advanced positive view point-outcome-oriented customers study, in practice, it will be difficult to examine because of products receivers, users' difference, even some products are only provided for urgent use and the after-use result and performance can not be obtained.

The first step in any project is planning. Organization must look at what organizational want to get out of e-work relationship and the different ways for making that happen.

Sample e-educational acceleration of organizations and educational acceleration of organization templates can help organization to develop a professional document that will serve as a tool to convince others of organization venture's potential for success.

An excellent place to start organizational search for good examples of educational acceleration of organizations or templates is the work relationship office in organization region.

## **9. Conclusion**

Organizational work relationship information officers are able to provide you with access to materials that can be tailored to organizational needs; all it takes is a visit in person, a phone call or an email. Organizational local work relationship centre offers a wealth of information, including practical tools and guides and specific examples, on how to start the planning process.

Corporate sustained growth relies on the ability to continually generate profits; this in turn depends on their products meeting customers' needs and expectations. There are many other organizations and work relationship websites that provide free templates, writing guides and sample plans. Organization may even choose to use web-based educational acceleration of organization applications or purchase software to help organization prepare organizational plans and forecasts. Listed below are a number of organizations that offer free templates and sample plans.

Clear guiding ideas and principles concerning quality and work relationship strategy as well as a comprehensive, company-wide realization model for organizing the ideas are not enough for getting quality happen. Practical means, tools, methods, etc., especially relevant management methodology, are available to get the approach concrete in practice. For this purpose, a collection of management

tools has created at organizations. Some of these tools have created and maintained by work relationship experts.

Generally, customer satisfaction is evidenced in the high rate of customer loyalty, good reputation, increase in market share, improvement of performance and reduction in complaints, etc. In contrast, the results of poor customer satisfaction include loss of customers, decrease in market share, deterioration of performance, poor reputation and increase in customer complaints, etc., which directly affects gross turnover and operating costs.

Therefore, customer satisfaction has become an important operating goal to which enterprises have competed to make the commitment.

Moreover, measuring and monitoring customer satisfaction has become an important research topic for enterprises.

Systematically monitoring customer satisfaction can provide managers with useful information for diagnosis, help an enterprise identify areas of improvement and thus increase profitability through continuous improvement in customer satisfaction.

This study attempted to explain how to set up a complete customer satisfaction and target management system based on the concepts of customer satisfaction and target management proposed in work relationship and e-educational acceleration of organization strategy as work relationship responsibility conduct real-world case study, identify the critical items in customer recognition through market analysis, survey of satisfaction and work relationship opportunity algorithm and eventually integrate corporate objectives to achieve sustained improvement.

The difficulty in long-term educational acceleration of organizing is also due to the rapid and unpredictable evolution of science work relationship, making it very hazardous to forecast development beyond a period. Educational acceleration of organizing in organizations acquired an impetus with long-term policy statements, such as work relationship vision. A science work relationship vision provides the wanted scenario to strive for, the end point of a long-term policy. However, the work relationship vision must be accompanied by a roadmap to allow the journey which starts now, to reach the required destination in the future. Steps will be taken to network the existing infrastructure, investments and intellectual strengths, wherever they exist, to achieve effective and optimal utilization, and constantly upgrade them to meet changing needs. Effectively using information technology is an important part of managing a work relationship. In e-educational acceleration of organization strategy, organization should outline how organization plans to use internet technologies to reach customers, manage organizational work relationship, and reduce costs. Organization should include information about e-commerce activities and selling organizational product or service online, website development, hardware and software requirements and relationships with external information technology specialists. Keep in mind that implementing e-work relationship strategies can save money if this is the case for organization may want to highlight potential savings in this section.
